ABOUT THIS TOOLKIT

This toolkit is designed to help stakeholders implement evidence-based practices when communicating about Breast Cancer Awareness Month. It can also help you plan, implement and evaluate your social media strategy and make the case for why it’s important.

WHO SHOULD USE THIS TOOLKIT?

Public health professionals, cancer control professionals, cancer centers, coalitions, community-based organizations and other stakeholders can use this toolkit and adapt its messaging for their unique audiences and areas of expertise.

ABOUT BREAST CANCER AWARENESS MONTH

Breast Cancer Awareness Month is an annual observance held throughout the month of October. It is intended to raise awareness of breast cancer, the most common cancer in women of all races and ethnicities, and to fundraise for research into its cause, prevention, diagnosis, treatment, survivorship and cure (Centers for Disease Control and Prevention [CDC], 2017). In 2015, over 242,000 women and over 2,100 men were diagnosed with breast cancer (CDC, 2018). October is also an opportunity to support those affected by breast cancer. Breast Cancer Awareness Month begins on October 1st and ends on October 31st.

SOCIAL MEDIA 101

According to a 2016 Pew Research Center survey, “69% of online adults use social networking sites” (Pew Research Center, 2017). In addition, a 2014 study found that nearly 75% of adults use social media to discuss health (Fox, 2014).

Social media represent a unique opportunity to reach a large audience of both consumers and professionals. It is more important than ever that online medical and health information is “trustworthy, engaging, and accessible to digitally empowered consumers” (Hootsuite, n.d., p. 2).

When designing and thinking about your social media strategy, consider your audience, the channel(s) you want to use, your objective(s), or what you are trying to achieve, as well as how you will measure success. Remember that your social media activities should ultimately support your organization’s goals (Hootsuite, nd.).

Looking to establish a social media strategy for your organization or make the case for why it’s important? The Centers for Disease Control and Prevention offers social media tools to create and establish a social media strategy. The site also offers guidelines and best practices as well as evaluation strategies, tools and templates.
Remember to tailor messaging to your intended audience or audiences. Your organization offers unique strengths and expertise. Make sure to capitalize on them to make your campaign effective.

**SOCIAL MEDIA CHANNELS**

Twitter, Facebook, Instagram, LinkedIn, Snapchat, Pinterest and more—social media are growing every day, along with opportunities for outreach.

**TWITTER BEST PRACTICES**

- Keep Tweets below the 280 character limit. This allows other users to Retweet while adding their own comments. Note that @names no longer count toward the 280 character limit on Twitter.
- Add photos or videos. Adding a photo boosts Retweets by 62% on average (Twitter Government and Elections Team, 2014).
- Tweet at author or organizational Twitter handles when possible. Note that Tweets that begin with a username will now reach all your followers, but they will be categorized as “replies.” If you want the Tweet to be seen on your timeline, use the “@” convention at the beginning.
- Twitter, Tweetdeck, Sprout Social and Hootsuite all have options to shorten links as you write Tweets. Other options for shortening links are provided under [Additional Tools and Resources](#).
- Promote engagement with other organizations by liking or Retweeting their content. You can even add your own comment before Retweeting.
- Be responsive and recognize Retweets, @ mentions and when others share your content. It doesn’t take much, but a simple “thank you” goes a long way toward building engagement.
- Remember that Tweets cannot be edited once they are posted, so proofread before you post!

**FACEBOOK BEST PRACTICES**

- Shorter posts (around 250 characters) get up to 60% more distribution than longer posts (CDC, n.d.).
- Use photos or videos to make your posts stand out. Posts with photos receive up to 50% more likes than non-photo posts (Hershkowitz & Lavrusik, 2013). However, be aware of Facebook’s policies about what can be posted and identifying people in photos without consent (CDC, n.d.).
- Use a conversational tone and explain to your audience why the content should matter to them (Hershkowitz & Lavrusik, 2013).
- Posts that start conversations by asking questions and responding receive approximately 70% above-average engagement (Hershkowitz & Lavrusik, 2013).
- Vary your post type. Users don’t engage the same way with every post (Hershkowitz & Lavrusik, 2013).
- Track your results and act on them. Facebook offers analytic data that you can use to find out what posts are being “liked” or shared and which ones aren’t. Focus your efforts on what is working (CDC, n.d.).
- More information about [Facebook best practices](#) is available from CDC.
LINKEDIN BEST PRACTICES

- Use a call to action to engage readers, like “click to find out more” (Sprout Social, 2016).
- Provide industry-specific content like industry insights or content about upcoming events (Sprout Social, 2016).
- Focus on practical and informative visuals rather than creative and unique (Sprout Social, 2016).
- Post up to once a day and aim for a new post every weekday. Aim to publish before and/or after work hours (Sprout Social, 2016).

BEST PRACTICES FOR COMMUNICATING ABOUT BREAST CANCER

The first step in any communication campaign is to define your audience. When communicating about breast cancer, your audience may be newly diagnosed or long-term survivors, caregivers, health care providers, employers or others. All of these audiences may have different messaging needs and may be reached through different channels. However, there are some commonalities in that cancer communication must help patients: “(1) Receive bad news, (2) handle the emotional impact of a life-threatening illness, (3) understand and remember complex information, (4) communicate with multiple health professionals, (5) understand statistics related to prognosis, (6) deal with uncertainty while maintaining hope, (7) build trust that will sustain long-term clinical relationships, (8) make decisions about treatment, possibly including participation in clinical trials and (9) adopt health-promoting behaviors (Epstein & Street, 2007, p. 1).”

Your organization’s communication efforts can be most effective when they:

- Consider health literacy and numeracy
- Promote patient-provider discussions of family history and risk
- Provide information about long-term care and survivorship issues in addition to treatment information
- Remind providers about the importance of communication and its impact on patients’ quality of life

Consider health literacy and numeracy

- **Use simple language.** Explain how data influence your audience and why they’re relevant (NCI, 2011).
- Organize information so the most important points are first (U.S. Department of Health and Human Services, n.d.).
- If presenting data, **use integers instead of decimals** as they are more convincing and easily recalled (Witteeman et al., 2011). Visual representations of data, like icon arrays are most effective: 🧑‍⚕️👨‍⚕️👩‍⚕️
- Where possible, **point consumers to supporting materials, visuals and reliable sources of information** such as trusted websites or physicians.
- Cancer patients and survivors often face “cancer information overload” and may feel overwhelmed by information and unable to process it (Chae, Lee & Jensen, 2015). **Mitigate information overload by using clear, direct and relevant communication strategies.**
Promote patient-provider discussions of family history and risk

- Present personalized risk information to facilitate patient-provider communication about breast cancer risk (Yi et al. 2015).
- Explicitly encourage patients to ask questions and be involved as this can facilitate shared decision making about care, while lack of permission or encouragement can be a barrier to involvement (Joseph-Williams, Elwyn & Edwards, 2014).
- Having a family history of breast cancer can increase a man’s risk of getting breast cancer but lack of awareness can delay diagnosis and reduce a man’s chances for successful treatment. Providers should identify male patients at high risk for breast cancer and discuss how they can manage their risk (American Cancer Society, 2018).

Provide information about long-term care and survivorship issues in addition to treatment information

- While women report being highly satisfied with information related to treatment, they are often less satisfied with information on long-term, physical, psychological and psychosocial effects of breast cancer and its treatments (Mallinger, Griggs & Shields, 2004). Let patients know about specific resources they can request, such as survivorship care plans or long-term recommendations about screening and follow-up.
- Stabile et al. (2017) found that breast cancer patients often have unmet sexual health needs. Address these needs by improving patient-provider communication and sharing educational resources that can help women manage long-term side effects.
- According to CDC recommendations, health care professionals should provide follow-up care to breast cancer survivors that focuses on tobacco cessation, increased physical activity, good nutrition, ongoing vaccinations, regular cancer screenings and pain management (Underwood et al., 2012).
- The American College of Surgeons requires Commission on Cancer (CoC)-accredited programs to “provide a summary of treatment and a follow-up plan to all patients completing cancer treatments” (American College of Surgeons, n.d.). Promote awareness of the CoC requirement, the American Cancer Society/American Society of Clinical Oncology Breast Cancer Survivorship Care Guideline and the Cancer Survivorship E-Learning Series for Primary Care Providers among providers.

Remind providers about the importance of communication and its impact on patients’ quality of life

- Patients frequently report health professionals as their most important information source. Remind providers of the critical role that they can play in addressing the information needs of patients (Finney Rutten et al., 2005).
- Patients who report having their information needs met report better mental health and physical health-related quality of life as well as lower rates of depression and anxiety (Husson, Mols & van de Poll-Franse, 2010). When creating messages for providers, emphasize the importance of communication and its impact on patients’ quality of life.
- Communication at diagnosis can significantly affect quality of life and remains significant for up to four years. Remind providers of the importance of offering clear and comprehensive information about a breast cancer diagnosis (Kerr, Engel, Schlesinger-Raab, Sauer & Hölz, 2002).
• **Promote participatory decision making** as this provider communication style may empower older women with breast cancer and help mitigate racial/ethnic disparities in treatment (Maly et al., 2008).

• **Prompt providers to spend more time talking to their patients.** Peppercorn (2012) noted that many patients may not report problems with their care in routine satisfaction surveys but may prefer to mention them in person, noting: “How many of the problematic events experienced by patients might be identified, and later prevented, by simply asking our patients more frequently, ‘Have you had any problems that we haven’t discussed yet?’ and ‘Are there any things that either I, my colleagues, or our clinic/hospital can do better?’” (Peppercorn, 2012, p. 1745).

• **Remind providers that they should avoid heteronormative assumptions about their breast cancer patients and explore a full range of surgical options** including being aware that forgoing breast reconstruction may actually be an affirming decision for LGBTQ+ survivors (Brown & McElroy, 2016; Rubin & Tanenbaum, 2011).

OTHER IDEAS TO PROMOTE BREAST CANCER AWARENESS

Host or Participate in a Twitter Chat or Twitterview

Twitter chats are a great way to expand your audience and promote engagement with other partners and organizations. You can organize a Twitter chat yourself or simply participate in another one. Twitter chats are live moderated Twitter conversations focused around a specific topic using a single hashtag. They usually last an hour and involve a list of pre-circulated questions to participants. If you are organizing a chat, reach out to partners early and provide the list of questions as far in advance as possible.

A Twitterview is an interview conducted through Tweets. For a Twitterview, typically an interviewer asks questions directly to the interviewee and participants can follow the conversation through an event hashtag. You may also open up the interview to questions from the audience. Potentially influential speakers might include researchers, cancer survivors or caregivers, health care providers or other subject matter experts.

Consider using a website to help manage the Twitterview or Twitter chat such as TweetChat or TWUBS.

Promote the event to your followers. Host the event, running it similarly to how you would host a live in-person meeting (introduce topic, speaker or participating organizations, your organization). Number your questions starting with a “Q” for question. For example: Q1: What questions should #breastcancer survivors ask their docs? #BCSMChat. Your speaker(s) can either “reply” to the question you Tweet or Tweet starting with an “A” and the corresponding number. For example: A1: Start w/questions about short- and long-term side effects & screening #BCSMChat.

Retweet or favorite the best questions posed by your followers and answers by your speaker(s) and be sure to share relevant links and resources. After the event, archive an event summary and share with participants and your other followers. Consider using Storify to create a visual transcript of the Twitterview or Tweet chat.

Live Tweet an Event or Conference

Consider live Tweeting a conference or other event around Breast Cancer Awareness Month. Live tweeting is a form of notetaking which is online and interactive. During an event, conference, speech or webinar, organizers and attendees can live tweet and use established hashtags so that everyone following the event hashtag can see the tweet and reply. During the event you can tweet quotes from speakers, share pictures of attendees, and retweet messages from the attendees. When quoting speakers, make sure to include their twitter handles to let them know you are promoting their sessions. You can also pre-write tweets and schedule them to go out during the event if you know when certain parts of the event are planned to occur.

Host a Facebook Live Event

Facebook Live is a live video streaming service that can be used to connect with your followers in real time. Facebook Live offers the opportunity to conduct live Q & A’s through the comment function where followers can ask questions or post commentary during the livestream. You can also use this livestream service to host an interview or broadcast an event, enabling people to participate even if they are not able to attend in person.

Pick a date and time. Tell your followers about your livestream event ahead of time. Live broadcasts can last for up to 4 hours.
Promote the event to your followers. Write a compelling description for your event which will show up on your followers’ newsfeeds along with the video to help people understand what your event is about. You can also add your location to the broadcast to increase discoverability. Keep track of your audience’s reactions to gauge how your broadcast is being received.

**Share Event Photos on Instagram**

Instagram is a photo sharing application that allows users to share pictures, videos, and messages with their followers. Instagram can be a great platform for increasing engagement with your audience and sharing your mission through photos. You can use Instagram to share photos from your events and feature individuals involved with the events such as speakers or volunteers. You can also share video clips from the events by posting them to your Instagram story. Encourage followers to share their photos of your events by using a hashtag.

**Pick a hashtag.** Using hashtags is a way to group and organize photos together. Many users search for photos in Instagram using hashtags. If you use an established hashtag, your Tweets may reach audiences that you usually do not reach. If you would like to create your own hashtag, make sure it is short and intuitive. You can increase visibility of your event by having followers post their photos to Instagram with a hashtag.

**Connect your Instagram** to your other social media accounts to cross-promote your activities and increase engagement with your audience.

**Share Your Event on Snapchat**

Snapchat is another social media platform to help you share photos and videos with your followers. Snapchat has over 158 million users with a majority of users under 30 years old (SproutSocial, 2017). You can share photos and videos individually with followers or share them in your Snapchat story. Photos and videos in your Snapchat story are visible to followers for 24 hours. You can use the story feature to promote your event, provide exclusive content such as behind the scenes footage or send a call to action. Share your story to your local “Our Story” to be featured on Snapchat’s map of stories and gain more visibility.

**Utilize Snapchat’s unique features** to promote your organization and events. Geofilters are location-based filters than can be used on photos and videos to further promote your cause as followers can then use these geofilters in their own posts. In the past, Snapchat has created geofilters for Giving Tuesday and donated to a designated charity every time someone posted using one of those geofilters. Snapcash is a feature that allows users to send money through Snapchat which could be a useful tool for soliciting online donations.

Check out this [Snapchat guide](#) for more information.

**Promote Your Cause on Pinterest**

Pinterest is an online tool that can help users discover and organize creative ideas by serving as a vison board. Pinterest can be used to drive more traffic to your website by adding eye-catching images, infographics, or quotes to your Pinterest boards and linking them to your website. Pinterest boards function as albums or folders in that they categorize pins for users to peruse. If you are just starting out with Pinterest it may be good to include general boards showcasing your organization’s mission in addition to adding event or fundraising boards for Breast Cancer Awareness Month.

**Link your website** and other social media accounts to your Pinterest by including them in the profile header to expand your exposure. If you have a YouTube channel or photo sharing page consider sharing those videos and photos on Pinterest as well.
Publish a Blog Post

Publishing blog posts can be a great way to highlight the successes of your organization and promote your events. Consider writing a post with a call to action for your readers to attend Breast Cancer Awareness Month events. Personal stories of patients or survivors, for example, can make for powerful blog posts by connecting with the reader emotionally. Use visuals such as photos and videos to illustrate your narrative and engage readers.

Create dialogue. Use your blog not only to share stories but also to communicate with your readers and increase engagement. Ask for audience feedback on your content and promote a space to discuss issues and share success stories.

Host a Reddit Ask Me Anything

Reddit is a social news aggregation, content rating, and discussion website. An Ask Me Anything (A.M.A.) is a feature on Reddit where users can interview someone with a notable trait such as a researcher or other expert through posting questions to the Reddit message board. The A.M.A. begins with the interviewee posting an introduction about themselves and then users respond with questions and comments. Users can “upvote” posted questions to indicate that are also interested in knowing the answer to those questions. A.M.As can be scheduled to start and stop at certain times or be open-ended in duration. Consider hosting an A.M.A with a breast cancer expert or survivor.

Publicize your A.M.A through your other social media channels to draw more participants.

Host a Breast Cancer Survivors Meetup Event

Consider hosting a meetup for local breast cancer survivors. It doesn’t have to be a formal support group setting or even have cancer survivorship as the main focus. It could simply be a social activity intended to gather cancer survivors, caregivers or family members who have been affected by cancer.

Consider reaching out to local organizations to solicit donations or prizes for the event. Organize a giveaway or prizes to encourage people to use your hashtag and engage with your content. Twitter and Instagram photo contests are another a great way to get your followers involved and engaged.

You might also consider hosting a special webinar or panel to promote Breast Cancer Awareness Month. Make sure to reach out to potential partners early to ensure support. Check out Communication Training for Comprehensive Cancer Control (CCC) Professionals 101 for more information on working with local media.

Best Practices for Engagement Events and Activities

- Plan early and well
- Expand your audience and reach by partnering with another organization
- Make sure you use an original hashtag (unless it makes sense to use an established hashtag)
- Involve well-known local figures to help raise the profile of your event(s) and increase participation and engagement
MEASURING SUCCESS

Looking to measure the success of your social media campaign? Twitter, Facebook, and Instagram both offer free analytic tools to allow you to demonstrate the impact of your social media efforts.

**Twitter Analytics** allows you to see and download detailed tracking information about Tweet activity, engagement, audience and trends over time. Log in to analytics.twitter.com with your Twitter username and password to learn more.

**Facebook Insights** allows users to track page likes, post reach, number of visits, specific posts as well as who is following your page. According to Facebook, “posts that get more likes, comments and shares show up more in News Feed and are seen by more people. Posts that are hidden, reported as spam or cause people to unlike your Page reach fewer people.”

**Instagram Insights** is available in the app for users who have an Instagram Business Profile. This tool allows you see overall account metrics, follower demographics, and metrics for your Instagram stories such as impression, reach, and replies.

**Viralwoot** helps track Pinterest analytics, schedule pins, promote pins, and gain new followers. This analytics tool provides statistics about your reach, activity, and engagement scores. It also provides you with an influence score and tells you what you need to do to boost your Pinterest presence.

**Snaplytics** allows users to manage their Snapchat stories, Instagram stories, and Instagram accounts and can help identify the most engaging content across platforms.

ADDITIONAL TOOLS AND RESOURCES

**Canva**: Allows users to create visually appealing graphics and photos for social media and print materials; includes a collection of low-cost or free stock photos and backgrounds

**CDC Public Health Image Library** (PHIL): Free image library.

**CDC "photostream" on Flickr**: Website designed for public image sharing. CDC images include public health photos and graphics developed for public health events that users can comment on and share.

**CDC Infographics**: Gallery of CDC-designed infographics to visually communicate data or information

**Goo.gl**: Link shortener that allows for tracking of clicks

**Guide to Making Communication Campaigns Evidence-Based**: Covers the process of planning, implementing and evaluating an evidence-based communication campaign

**Hootsuite, Sprout Social**: Online platforms that allow organizations to schedule Tweets and Facebook posts, keep up with their feed (the posts of those they follow), and collect basic analytics for evaluation

**Media Planning and Media Relations Guide**: In-depth guide to working with media and establishing a media and communications strategy

**Owly**: Link shortener from Hootsuite

**Periscope**: Live-streaming video app so you can show events or videos live to your audience on social media

**Social Media Toolkits**: Additional social media toolkits from the GW Cancer Center
Thunderclap: Social networking tool that allows you to “crowdsorce” your social media campaign to increase its impact

TinyURL: Link shortener that allows for customization of URLs to make them more memorable

Tweetdeck: Platform from Twitter that allows for pre-scheduling Tweets, including pre-loading photos

GLOSSARY

Ask Me Anything (A.M.A): A feature of Reddit where users can interview someone through posting questions to the Reddit message board

Facebook: A social networking site that allows people to create personal profiles and stay connected with others (www.facebook.com)

Facebook Live: A live video streaming service provided through Facebook

Feed: News feeds which you receive straight into your account

Followers: People who have agreed to receive your Tweets or Facebook posts

Hashtags (#): A form of metadata tag that makes it possible to group messages

Instagram: A photo sharing application that allows users to share pictures and videos to their followers either publicly or privately to pre-approved followers (https://www.instagram.com/)

Live Tweet: To post comments about an event on Twitter while the event is taking place

Pinterest: A website where users can discover information mainly through images, GIFs (animated images), and videos (https://www.pinterest.com/)

Reddit: A social news aggregation, content rating, and discussion website (https://www.reddit.com)

Retweet (RT): Re-posting of someone else’s Tweet

Snapchat: an image messaging application where messages auto-delete after set amount of seconds

Tweets: 280-character text messages

Twitter: An online social networking and microblogging service that enables users to send and read short 280-character text messages, called “Tweets” (www.twitter.com)

Twitter chat: A live moderated Twitter conversation focused around a specific topic using a single hashtag

Twitter handle: Your Twitter name that begins with the “@” sign. For example: @GWCanncer

Twittersphere or Twitterverse: The total universe of Twitter users and their habits

Twitterview: A combination of the terms Twitter, a popular microblogging platform, and interview. It is a type of interview for which the medium restricts the interviewer and interviewee to short-form responses. See Twitter’s “Twitter Glossary” for more.
